# Joint Release U.S. Department of Housing and Urban Development

U.S. Department of Commerce • Washington, D.C. 20233

FOR IMMEDIATE RELEASE FRIDAY, OCTOBER 24, 2014 AT 10:00 A.M. EDT

CB14-195

Raemeka Mayo or Stephen Cooper Manufacturing and Construction Division (301) 763-5160

### **NEW RESIDENTIAL SALES IN SEPTEMBER 2014**

Sales of new single-family houses in September 2014 were at a seasonally adjusted annual rate of 467,000, according to estimates released jointly today by the U.S. Census Bureau and the Department of Housing and Urban Development. This is 0.2 percent  $(\pm 15.7\%)^*$  above the revised August rate of 466,000 and is 17.0 percent  $(\pm 20.6\%)^*$  above the September 2013 estimate of 399,000.

The median sales price of new houses sold in September 2014 was \$259,000; the average sales price was \$313,200. The seasonally adjusted estimate of new houses for sale at the end of September was 207,000. This represents a supply of 5.3 months at the current sales rate.

New Residential Sales data for October 2014 will be released on Wednesday, November 26, 2014, at 10:00 A.M. EST.

Our Internet site is: http://www.census.gov/newhomesales

The U.S. Census Bureau updated its application programming interface (API) with monthly and quarterly economic indicators. The API allows developers to combine Census Bureau statistics with other data sets to create tools for research on a variety of other topics. For more information, go to <a href="http://www.census.gov/developers/">http://www.census.gov/developers/</a>.

To receive the latest updates on the Nation's key economic indicators, download the America's Economy app for Apple and Android smartphones and tablets.

#### **EXPLANATORY NOTES**

These statistics are estimated from sample surveys. They are subject to sampling variability as well as nonsampling error including bias and variance from response, nonreporting, and undercoverage. Estimated average relative standard errors of the preliminary data are shown in the tables. Whenever a statement such as "2.5 percent (±3.2%) above" appears in the text, this indicates the range (-0.7 to +5.7 percent) in which the actual percent change is likely to have occurred. All ranges given for percent changes are 90-percent confidence intervals and account only for sampling variability. If a range does not contain zero, the change is statistically significant. If it does contain zero, the change is not statistically significant; that is, it is uncertain whether there was an increase or decrease. The same policies apply to the confidence intervals for percent changes shown in the tables. Changes in seasonally adjusted statistics often show irregular movement. It takes 3 months to establish a trend for new houses sold. Preliminary new home sales figures are subject to revision due to the survey methodology and definitions used. The survey is primarily based on a sample of houses selected from building permits. Since a "sale" is defined as a deposit taken or sales agreement signed, this can occur prior to a permit being issued. An estimate of these prior sales is included in the sales figure. On average, the preliminary seasonally adjusted estimate of total sales is revised about 4 percent. Changes in sales price data reflect changes in the distribution of houses by region, size, etc., as well as changes in the prices of houses with identical characteristics. Explanations of confidence intervals and sampling variability can be found on our web site listed above.

<sup>\* 90%</sup> confidence interval includes zero. The Census Bureau does not have sufficient statistical evidence to conclude that the actual change is different from zero.
