## The National Longitudinal Mortality Study Public-use File Variable Reference Manual, Version 4

### Introduction

The National Longitudinal Mortality Study (NLMS) is a national, longitudinal, mortality study sponsored by the [National Heart, Lung, and Blood Institute](#), the [National Cancer Institute](#), the [National Institute on Aging](#) (all part of the National Institutes of Health), and the [National Center for Health Statistics](#), and the [U.S. Census Bureau](#) for the purpose of studying the effects of differentials in demographic and socio-economic characteristics on mortality.

The NLMS *Public Use Microdata Sample (PUMS)* is a specialized extract of the full NLMS that is designed to provide easy access to an extract of the main NLMS while protecting the confidentiality of those who have responded to the original surveys on which the NLMS is based. This documentation describes the unique structure of the PUMS files and identifies variables selected from the NLMS to be part of the NLMS PUMS.

The main NLMS consists of a database developed for the purpose of studying the effects of demographic and socio-economic characteristics on differentials in U.S. mortality rates. The NLMS is a unique research database in that it is based on a random sample of the non-institutionalized population of the United States. It consists of U.S. Census Bureau data from Current Population Surveys (CPS) and a subset of the 1980 Census combined with death certificate information to identify mortality status and cause of death. The study currently has approximately 2.7 million records with over 341,000 identified mortality cases. The content of the socio-economic variables available offers researchers the potential to answer questions on mortality differentials for a variety of key socio-economic and demographic subgroups not covered as extensively in other databases. This project has generated over 70 publications in various prominent scholarly, scientific, and public health related journals.

The main NLMS currently consists of Annual Social and Economic Supplements which cover the period from March 1973 to March 2002; CPS for February 1978, April 1980, August 1980, December 1980, and September 1985; and one 1980 Census cohort—30 cohorts in all. Mortality information is obtained from death certificates available for deceased persons through the National Center for Health Statistics. Standard demographic and socio-economic variables like education, income, and employment, as well as information collected from death certificates including cause of death are available for analyses.

### Design and Content of the NLMS PUMS Files

There are two file formats in the NLMS PUMS. **File 11** consists of a subset of the 30 CPS cohorts included in the full NLMS that can be followed prospectively for 11 years. The content of each record on the file includes demographic and socioeconomic variables from the CPS combined with a mortality outcome, if there is one. To prevent disclosure, all of the File 11 files have been concatenated into a single file, and the temporal dimension has been altered. In lieu of

identifying the CPS year and starting point of mortality follow-up for each file, all of the records in File 11 have been assigned a common starting point, denoted as April 1, 1983. These records are then tracked forward for 11 years to observe whether anyone in the file has died.

For those who have died, the underlying cause of death and follow-up time until death have been provided. For those not deceased, the follow-up time provided is the full observation length, or 11 years. In the construction of File 11, it was assumed that these surveys, collected from throughout the early 1980s, would adequately reflect the U.S. non-institutionalized population on April 1, 1983. Under this assumption, the separate CPS samples have been combined and can be viewed as one large sample taken on that date. Original weights were recalculated to reflect the size of the U.S. non-institutionalized population at that time.

The second PUMS format is actually two files, divided according to whether the original CPS surveys were taken in the early 1980s, **File 6a**, or taken in the early 1990s, **File 6b**. Both of these files have a maximum follow-up duration of six years. The weights on these two files were set to represent the size of the U.S. non-institutionalized population on April 1, 1983 for File 6a, and on April 1, 1993 for File 6b. Otherwise, they are identical to PUMS File 11.

This fourth release of the NLMS PUMS is an extension of the previous three releases. It includes additional records and variables, and provides two new six-year follow-up files; the files follow the same structure as the previous NLMS PUMS.

### **The State of Residence Variable**

An important variable on this file is the state of residence at the time of survey. The inclusion of this variable in the file is permitted as long as the area represented by the intersection of the geographical variables on the file did not contain less than 100,000 persons of the U.S. population, a Census Bureau requirement that protects the confidentiality of CPS participants. In order to meet this requirement, the intersection of the three geographic variables on this public-use file—state of residence, urban/rural status, and SMSA status—was examined to identify areas of sparse population. For those areas not meeting the 100,000-population minimum requirement, the levels of urban/rural or SMSA status were adjusted in a manner to have the least misleading impact on the geographical definition. No change in the defined state of residence was made in this adjustment process.

## NLMS PUMS Variable Descriptions, Codes, and Frequencies

### FILE AND SURVEY VARIABLES

#### 1. Record Number RECORD

[Return to Index](#)

**DESCRIPTION:** A sequential number for each record on the file.

#### FREQUENCIES

There are 1,222,344 records in the 11 years follow up, **File 11**.

There are 1,041,913 records on file from first 6 years of follow up, **File 6a**.

There are 526,373 records on file from the second 6 years of follow up, **File 6b**.

#### 2. Adjusted Weight WT

**DESCRIPTION:** This public use file consists of records from many separate CPS surveys. All records have been weighted to give population totals for the non-institutionalized population of the U.S. on April 1, 1983 for File 11 and File 6a, and April 1, 1993 for File 6b. Weights were obtained by ranking age-sex-race group totals by state totals for each survey. Survey weights were then readjusted to the target dates' U.S. population, accounting for the different numbers of records by survey in this each of the three files.

#### 3. Household Identification Number HHID

**DESCRIPTION:** The household identification number is a unique 7-digit number assigned to every member of a household.

**4. Presence of SSN SSNYN**

[Return to Index](#)

**DESCRIPTION:** Indicator of the presence or absence of Social Security Number on the CPS record.

**CODES AND FREQUENCIES**

Codes		File 11	File 6a	File 6b
0	Not present on CPS	328,745	328,745	135,105
1	Present on CPS	893,599	713,168	391,268
		1,222,344	1,041,913	526,373

## GEOGRAPHY VARIABLES

### 5. State Recode      STATER

[Return to Index](#)

**DESCRIPTION:** The state of residence at the date of interview. First digit of STATER is the Census Bureau division code. The second digit is the state within the division code.

Codes are given in [Appendix A](#).

### 6. Urban/Rural Status      URB

**DESCRIPTION:** Urban or rural status. The definition of urban and rural follows from the 1970, 1980, or 1990 Census as appropriate to the source file. In those three definitions, an urban area consists of all persons living in urbanized areas and in places of 2,500 or more inhabitants outside urbanized areas. More specifically, the urban population consists of all persons living in:

(1) places of 2,500 or more inhabitants incorporated or identifiable as cities, villages, boroughs and towns, but excluding those persons living in the rural portions of extended cities; and

(2) other territories, incorporated and unincorporated included in urbanized areas.

The population not classified as urban constitutes the rural population.

#### CODES AND FREQUENCIES

	1,222,344	1,041,913	526,373

**7. SMSA Status SMSAST**

[Return to Index](#)

**DESCRIPTION:** Is a household located in an SMSA or not? The definition of SMSA is based on county boundaries included in the region defining the SMSA at the time of the 1970 or 1980 Census. A central city is defined as the city or cities associated with the name designation of the SMSA Codes.

**CODES AND FREQUENCIES**

Codes		File 11	File 6a	File 6b
.	Unknown	13,243	13,243	0
1	SMSA, in central city	318,094	269,709	148,791
2	SMSA, not in central city	446,281	369,791	229,967
3	Not in an SMSA	444,726	389,170	147,615
		1,222,344	1,041,913	526,373

## AGE AND GENDER VARIABLES

### 8. Age at Time of Interview      AGE

[Return to Index](#)

**DESCRIPTION:** The age of the person at the time of the survey. If age was not available on the CPS record, then age was taken from CPS control file data. If age was not available from either of these sources but month and year of birth were available, then age was calculated using month and year of birth. Age is top coded at 90 years. The records of persons of unknown age are not included in this file.

#### CODES

Actual ages to 90 years old. All valid ages over 90 are coded as 90.

### 9. Sex      SEX

**DESCRIPTION:** The code for gender is determined from CPS records as first priority and from the CPS control file as second priority. Persons for whom a gender could not be determined are not maintained on this file.

#### CODES AND FREQUENCIES

Codes		File 11	File 6a	File 6b

		1,223,344	1,041,913	526,573

**10. Region of Birth POB**[Return to Index](#)

**DESCRIPTION:** Place of birth is categorized into 11 different regions of birth, isolating Mexico and splitting Europe. For the U.S. born category, the FIPS state code is prefixed by “9” to create codes in the 900’s. The two-digit FIPS state codes are listed in [Appendix B](#). For example, the POB code 904 represents Arizona since the FIPS code for Arizona is 04.

**15. Number of People in Household      HHNUM**

[Return to Index](#)

**DESCRIPTION:** The number of persons residing in the household at the time of the interview.

**NOTE:** For some households HHNUM is computed directly from within the source NLMS file. It is defined to be the number of records in this file having the same PSU, SEGMENT, and SERIAL NUMBER. For the remaining records, household size is taken directly from the original CPS record.

**16. Housing Tenure      TENURE**

**DESCRIPTION:** Variable defines the type of ownership of the residence. All members of the household receive the same values.

**CODES AND FREQUENCIES**

## OTHER DEMOGRAPHICS VARIABLES

## 17. Highest Grade Completed EDUC

[Return to Index](#)

**DESCRIPTION:** Highest grade completed at the time of the interview. There are two different concepts the CPS has used to measure education: the years of school approach and the educational achievement approach. The first asked the highest grade level respondents had attended, and had a separate question that verified whether the respondent had actually completed that grade; the second concept enquired about educational achievement in terms of *degrees attained* such as a high school diploma, a B.A. or a Ph.D. CPS employed the years of school concept through 1991 and switched to the achievement concept starting with 1992. EDUC roughly translates the post-1991 attainment data into the equivalent years of school completed.

## INCOME AND POVERTY VARIABLES

### 25. Inflation Adjusted Income      ADJINC

[Return to Index](#)

**DESCRIPTION:** Family income inflated to 1990 dollars is assigned a category as indicated below. The determined category is then assigned to each member of the family. For CPS files with categorical values of income, the median value of the category of income is inflated by the corresponding CPI and then assigned to the appropriate category.

**26. Income as Percent of Poverty Level**      **POVPCT**[Return to Index](#)

**DESCRIPTION:** This variable is defined by taking the family income, adjusted for inflation to 1990 dollars, and comparing it to the 1990 defined poverty level. Family size and number of children in the family determine the poverty threshold level. A categorical variable value is assigned according to the category of percent of poverty level as indicated below. All members of the family are assigned the same value of POVPCT.

## DEATH CERTIFICATE INFORMATION VARIABLES

### 29. Death Indicator      **INDDEA**

[Return to Index](#)

**DESCRIPTION:** An indicator variable identifying decedents in the file. Deaths occurred within an 11 year follow-up period after the CPS interview.

#### CODES AND FREQUENCIES

Codes		File 11	File 6a	File 6b
0	Alive	1,109,969	994,829	500,399

		1,222,344	1,041,913	526,373

### 30. Cause of Death      **CAUSE113**

**DESCRIPTION:** A recode of the underlying cause of death using the International Classification of Diseases 1992 (ICD-10) codes into 113 groups according to the causes as defined by codes developed by the National Center for Health Statistics. See [Appendix E](#).

Cause of death 10 (Syphilis) and cause of death 15 (HIV) were combined into cause of death 17 (other and unspecified infectious diseases).

**31. Length of Follow-up FOLLOW**

[Return to Index](#)

**DESCRIPTION:** The length of follow-up period in days.

Persons who were alive at the end of the 11 year follow-up period are given a value of 4018, the maximum follow-up period considered. Persons who were alive at the end of the 6 year follow-up period are given a value of 2192, the maximum follow-up considered.

**CODES**

1-4018 Full days between start of follow-up and death or the full days between start of follow-up and end of follow-up **for those alive at the end of 11 years of follow-up.**

1-2192 Full days between start of follow-up and death or the full days between start of follow-up and end of follow-up **for those alive at the end of 6 years of follow-up.**

**32. Time from Onset to Cause of Death INTERV**

**DESCRIPTION:** Identifies the interval of time between the immediate cause of death and the occurrence of death.
