

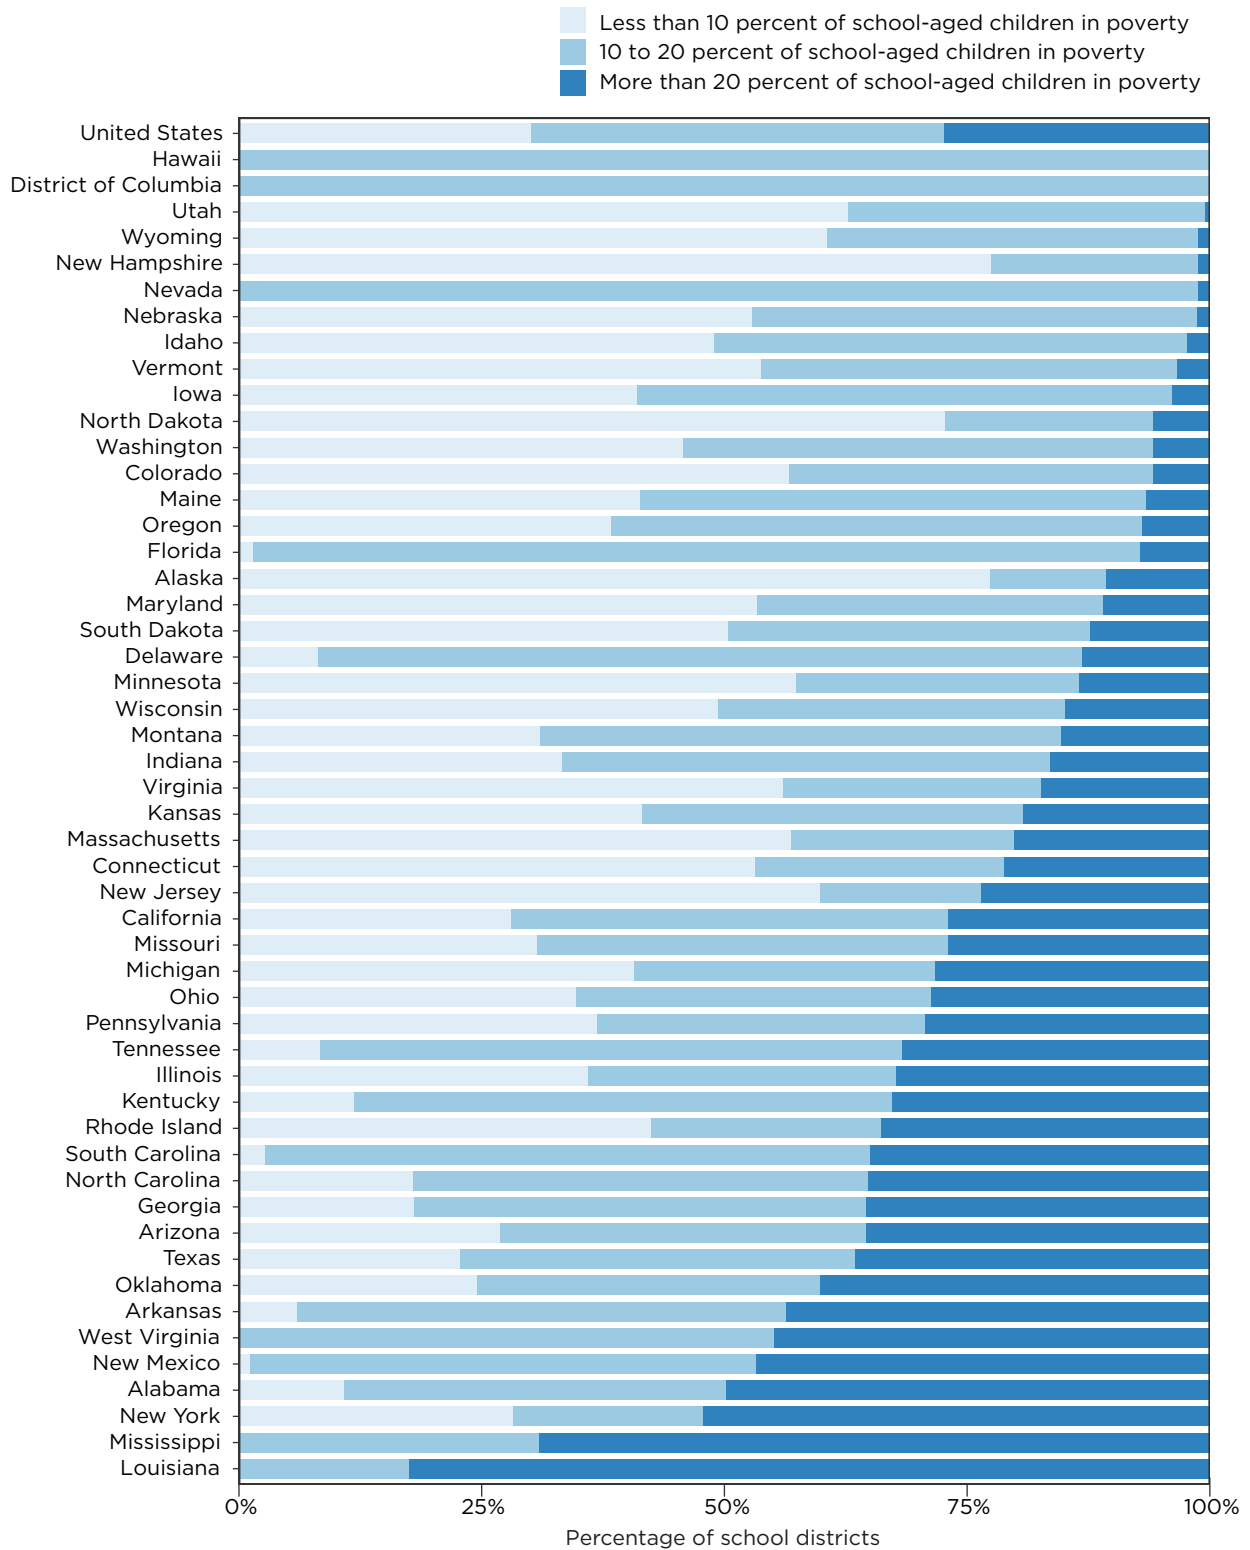

Figure 11.

**Distribution of School District Poverty Rate by State: 2019**

Note: Each bar of the figure displays the percentage of school districts within each state belonging to each of the three categories of poverty. This percentage is weighted by the population of school-aged children within each district, so that the size of each colored segment is representative of the number of children residing in each category of poverty. Hawaii and the District of Columbia contain one school district.
