# Statistics Canada Missing Link to True Multimode

Presentation to Fed CASIC 2010

**Daniel Boucher**

March 18th, 2010

# Overview

- Current State
- Attempt at Multimode
- Drivers for Change
- Survey Master Control System
- Question(s)

# Current State

# Statistics Canada Surveys

## ■ Characteristics

- 386 surveys per year
- Widely varying sample sizes
- Business, social, institutional, agricultural
- Interviewers and editors
- Varied survey characteristics
- Interaction with other systems
- Multiple systems to process collected data
- Various communities with different collection strategy/ approach

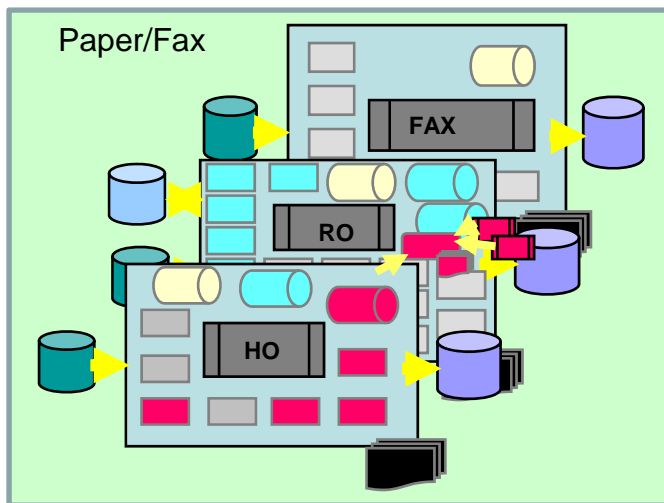

# Current State of Collection

- Multiple modes of survey data collection:
  - Computer Assisted Telephone Interviewing (CATI)
  - Computer Assisted Personal Interviewing (CAPI)
  - Mail out / Mail back (Paper)
  - E-Questionnaire (Internet) \*\*
  - E-File Transfer (Internet) \*\*
- Multiple collection sites

\*\* new service launched in 2009

# Collection Systems

# Attempt at Multimode

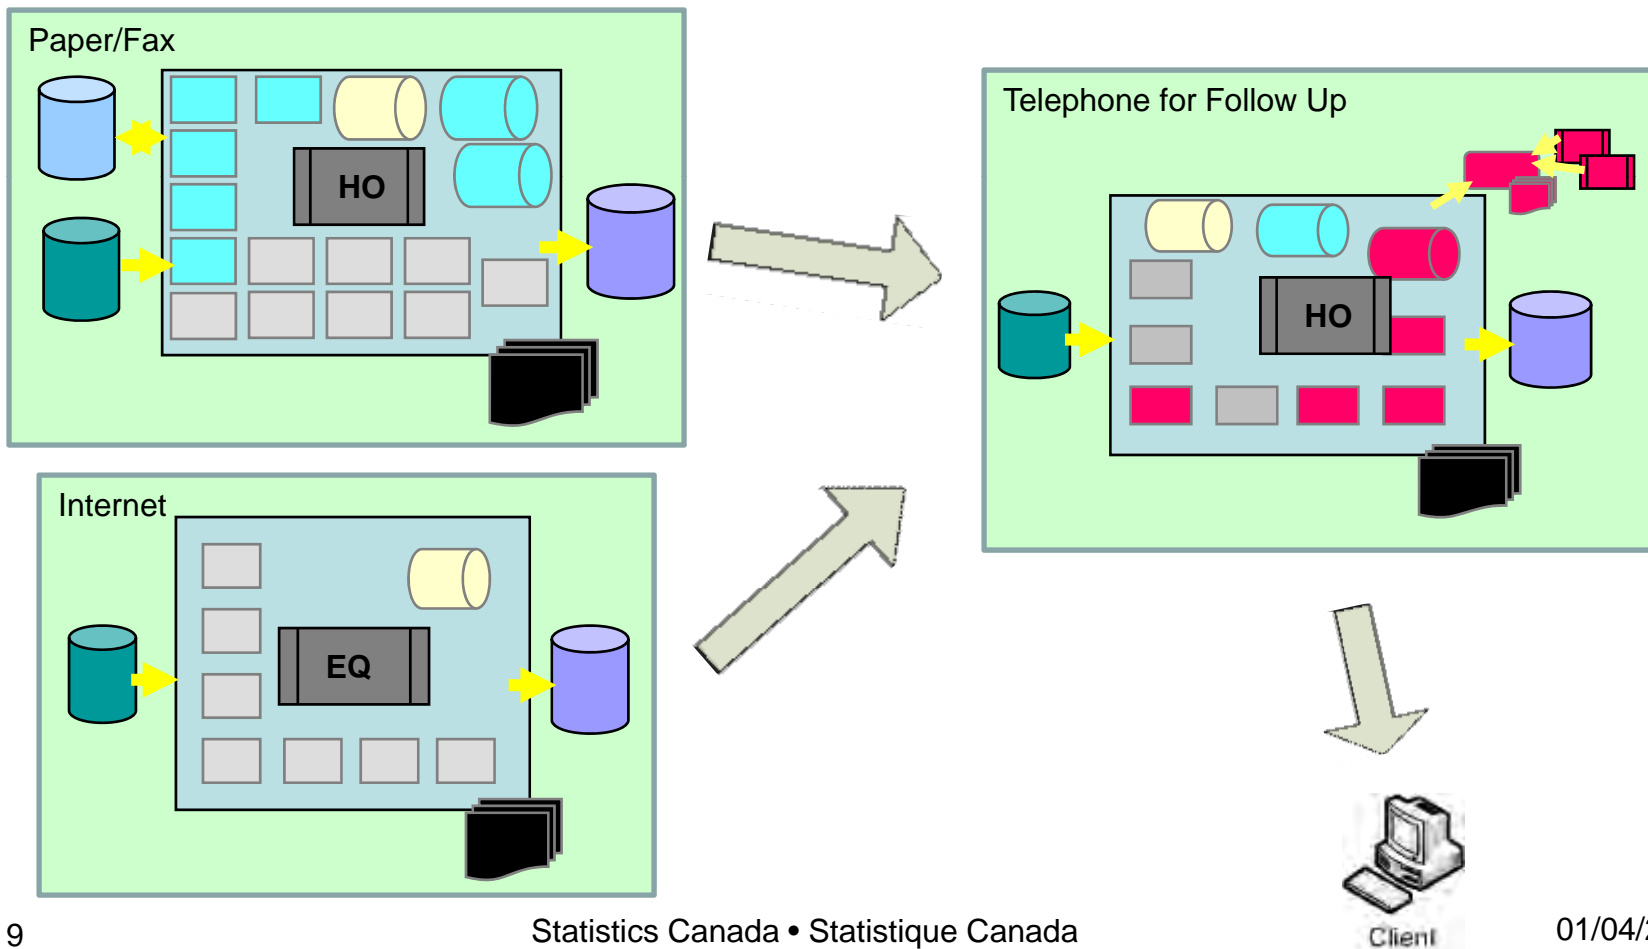

## Current Solution to Multimode

- Business surveys
- Concurrent data collection via paper, fax and Internet
- All data integrated via CATI systems
- Most Non Response and Field Edits Follow up performed using CATI systems
- Collection data transferred to client divisions

# Current Multimode Solution

# Drivers for Change

## Current Multimode Limitation

- Current systems and modes are stove-piped and cannot exchange information easily
- Standardization has been along business line or collection modes
- Little support to manage of the overall “collection” effort
  - No single view of all modes of collection
  - Difficult to move cases between modes and/or collection sites
- No concept of a common repository for the data
- New modes have to adapt to legacy systems

## Other Drivers for Change

- **Collection Modernization Vision**
  - Conduct collection in an integrated and flexible way
  - Be more responsive to clients and respondents requirements
  - Operate more efficiently
- **Collection partners want:**
  - better tools to actively manage collection
  - better management of non-responses
  - better business resumption capabilities
  - more flexible response options for respondents

# Survey Master Control System (SMCS)

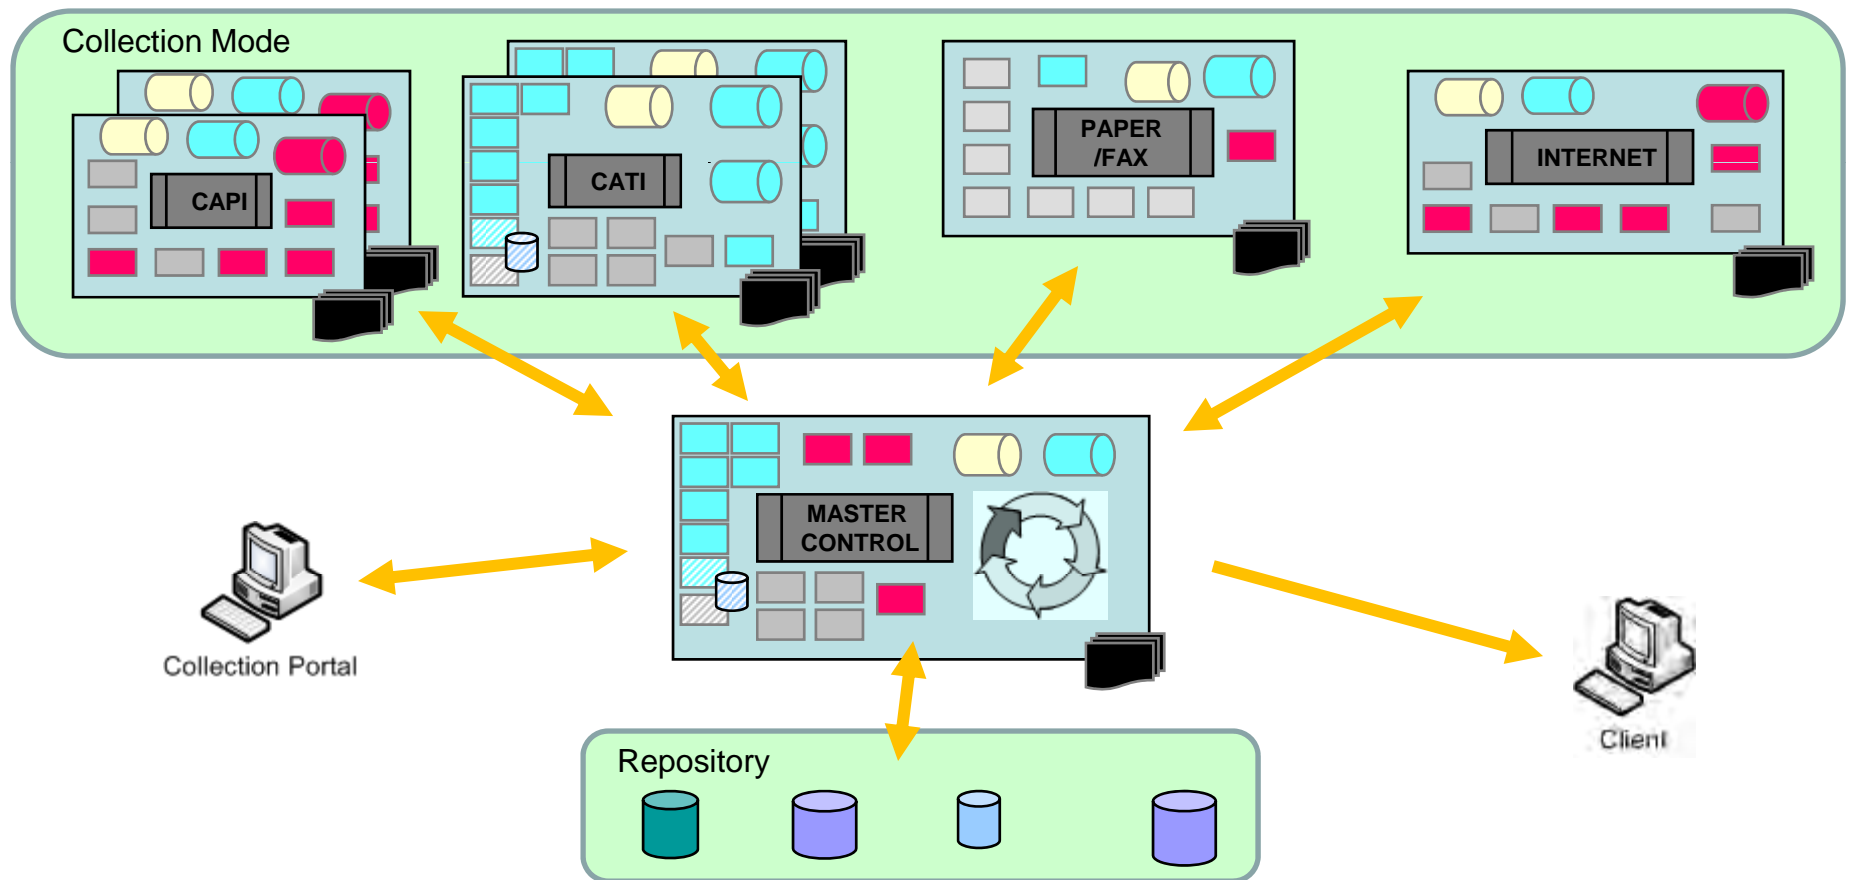

# SMCS Stakeholder Requests

- Move cases between modes and sites
- Common view of paradata
- Define rules for their surveys
- Security and permissions to control level of access by type of user
- Accept sample files in a standard format
- Single output file
- Track cases and keep audit records

# SMCS Diagram

# SMCS Features

- Survey and Cycle Management
- Sample File Management
- Collection (Case) Management
- Dashboard and Reports across modes and sites
- Collection System Administration
- Communication to Collection Applications in Modes and Sites
- Data Output to Client

# SMCS Technology

- Service Oriented Architecture (SOA)
- Internet Information Services (IIS) 6.0
- Windows Communication Foundation (WCF)
- Microsoft .Net Framework 3.5
- SQL Server for database and business intelligence
- BizTalk Server for messaging and orchestration
- XML based (support ASCII for sample file)
- Architecture easily scalable and adaptable

# SMCS Project

- Phase 1 (April, 2007 to July, 2010)
  - Highlights
    - Survey, Cycle, Sample File and Collection (Case) Management
    - Reports across modes and sites
    - CATI and CAPI modes Integration
    - Social and Agricultural surveys
    - Identified early adopters (CCHS & Ag)
- Phase 1b (January, 2010 to January, 2011)
  - Highlights
    - E-Questionnaire Integration
    - XML Data Structure and Exchange
    - Migration of other Social and Agriculture surveys

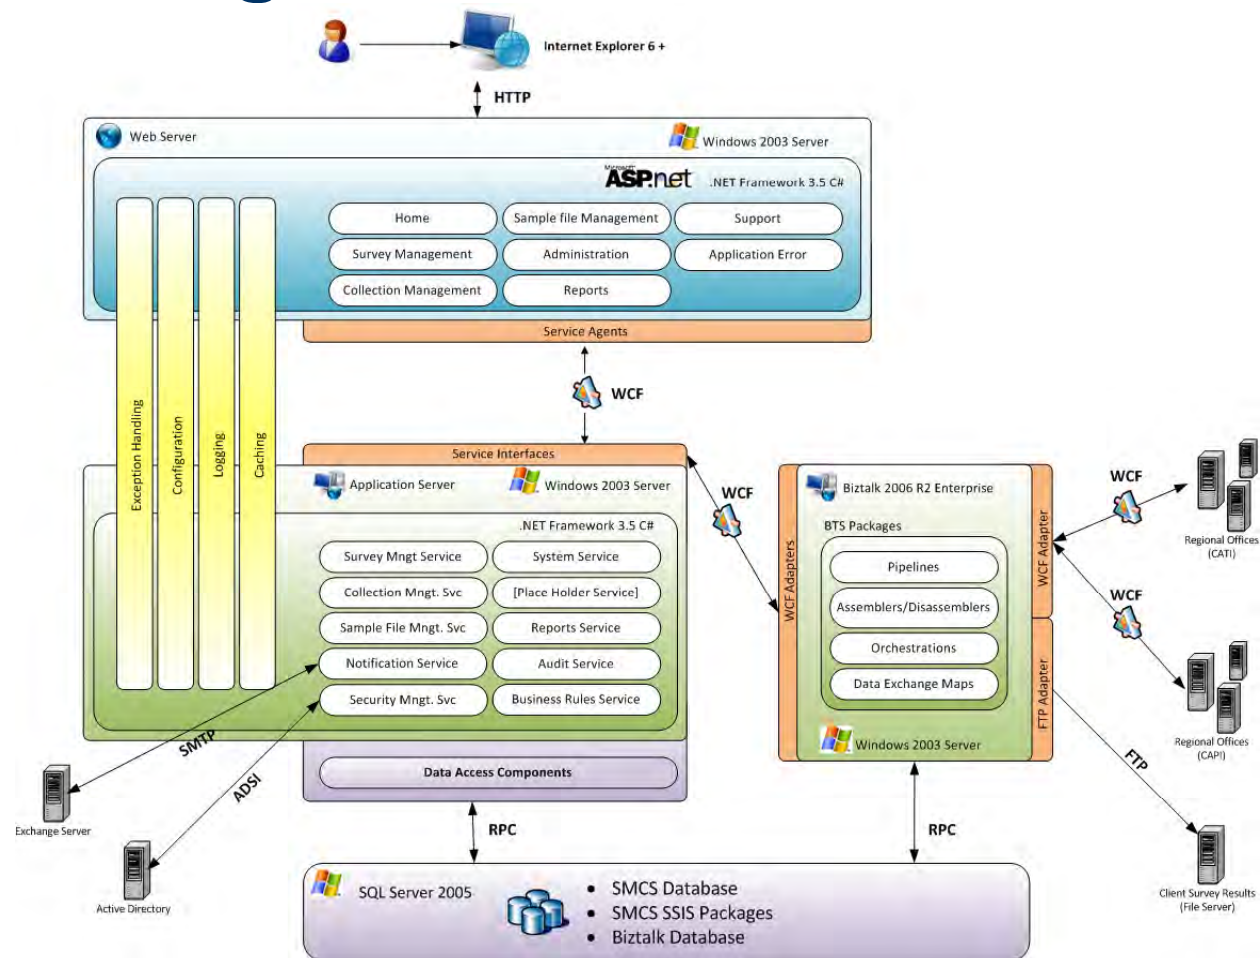

# SMCS Project

- Phase 2 (August, 2010 to ???)
  - Highlights
    - Business surveys integration
    - Paper and fax modes integration
    - Generic workload assignment across modes and sites
    - Support for other collection support services such as Tracing, First Level Editing, Questionnaire Generation System, Data Transformation, etc.
    - Enhance reports and dashboard
    - Sample File from Corporate Frame Systems (i.e. Business Register)

# SMCS Logical Architecture

## Route Cases

Survey Cycle: CCHS - 200901

Total cases to be routed: 1

**Specify the Target Destination.**

\* Mode: CAPI  
\* Site: Halifax

**Specify the reason these cases are being manually routed.**

\* Reason:  
capacity issues  
language cases  
Site emergency (systems available)  
Site emergency (systems NOT available)  
Strike or other HR situation  
Tracing cases  
Other
