Preliminary: U.S. Imports for Consumption of Steel Products April 2015

The U.S. Census Bureau announced today that preliminary April steel imports were \$2.9 billion (3.2 million metric tons) compared to the preliminary March totals of \$3.1 billion (3.3 million metric tons).

The April change in steel imports based on metric tonnage reflected a decrease primarily in plates in coils; galvanized hot dipped sheets and strip; and reinforcing bars. Increases occurred primarily in blooms, billets, and slabs; cold rolled sheets; and line pipe. Decreases occurred primarily with Turkey, India, and South Korea. Increases occurred primarily with Brazil, Russia, and Mexico.

The year to date final statistics through March 2015 showed steel imports of 10.6 million metric tons compared with 8.8 million metric tons through March 2014. The largest commodity increases occurred primarily in oil country goods and line pipe. Decreases occurred primarily in blooms, billets, and slabs. The largest country increases occurred primarily with South Korea. Decreases occurred primarily with Russia.

Notes:

The data in this report are preliminary and subject to revisions.

Analysis of recent months for steel product imports indicates the value of preliminary data should equal about 96 percent of the final value reported in the regular monthly trade statistics report. Preliminary data reported for individual steel categories and at the individual country of origin level have been less consistently predictive of the final data reported in the regular monthly trade statistics. For further details, visit our web site at www.census.gov/trade. On the website, you can access product by country and country by product tables.

The next release is June 24, 2015.
