Highlights

- Median household money income for the nation was \$50,100 in 2011, a decline of 1.5 percent from 2010, in real terms.
- The 2011 official poverty rate for the nation was 15.0 percent and there were 46.2 million people in poverty, not statistically different from last year.
- The percentage of people without health insurance coverage decreased in 2011 to 15.7 percent from 16.3 percent in 2010. The number of uninsured also decreased to 48.6 million in 2011 from 50.0 million in 2010.

Real Median Household Income: 1967 to 2011

Real Median Household Income: 1967 to 2011

(Income in 2011 CPI-U-RS adjusted dollars)

Year	Median Income	Year	Median Income
1967	42,056	1990	49,950
1968	43,868	1991	48,516
1969	45,499	1992	48,117
1970	45,146	1993	47,884
1971	44,707	1994	48,418
1972	46,622	1995	49,935
1973	47,563	1996	50,661
1974	46,057	1997	51,704

(NA) Not available.

¹Starting with the 2003 CPS, respondents were allowed to choose more than one race.

This table presents the single-race population for 2002 to 2011. For example White alone refers to people who reported White and did not report any other race category. For 2001 and earlier years, the CPS allowed respondents to report only one race group.

²The 2004 data have been revised to reflect a correction to the weights in the 2005 ASEC.

Note: For changes in survey and data processing methodology, see footnotes in Appendix Table A-1 of the report, *Income, Poverty, and Health Insurance Coverage in the United States: 2011*, U.S. Census Bureau, [Current Population Reports](#), P60-243.

¹Change in data collection methodology suggests pre-1993 and post-1992 estimates are not comparable. (See Current Population Reports, "The Changing Shape of the Nation's Income Distribution: 1947-1998," P60-204, for more details.)

²The 2004 data have been revised to reflect a correction to the weights in the 2005 ASEC.

Note: For changes in survey and data processing methodology, see footnotes in Appendix Table A-2 of the report, *Income, Poverty, and Health Insurance Coverage in the United States: 2011*, U. S. Census Bureau, [Current Population Reports](#), P60-243.

Source: U.S. Census Bureau, Current Population Survey, 1968 through 2012 Annual Social and Economic Supplements.

For information on confidentiality protection, sampling error, nonsampling error, and definitions,

see www.census.gov/apcd/techdoc/cps/cpsmar12.pdf.

Note: To adjust your income by family size relative to a 4-person family, use the following factors:
 Single person, multiply income by 2.2
 Married-couple, multiply income by 1.5
 Married-couple with one child, multiply income by 1.4

Change in Share of Aggregate Equivalence-Adjusted Income by Quintile and Top Five Percent: 2010 and 2011

Equivalence-Adjusted Income by Quintile and Top Five Percent: 2010 and 2011

(Income in 2011 CPI-U-RS adjusted dollars)

Quintile	2010	2011	Percent change (2011 less 2010)
Lowest Quintile	3.4	3.4	0.1
Second Quintile	9.2	9.0	* -1.6
Middle Quintile	15.0	14.8	* -1.9
Fourth Quintile	23.1	22.8	* -1.6
Highest Quintile	49.2	50.0	* 1.6
Top 5 Percent	21.0	22.1	* 5.3

*Statistically different from zero at the 90 percent confidence level.

¹Change in data collection methodology suggests pre-1993 and post-1992 estimates are not comparable. (See Current Population Reports, "The Changing Shape of the Nation's Income Distribution: 1947-1998," P60-204, for more details.)

²The 2004 data have been revised to reflect a correction to the weights in the 2005 ASEC.

Note: For changes in survey and data processing methodology, see footnotes in Appendix Table A-3 of the report, *Income, Poverty, and Health Insurance Coverage in the United States: 2011*, U. S. Census Bureau, [Current Population Reports](#), P60-243.

¹Starting with the 2003 CPS, respondents were allowed to choose more than one race. This table presents the single-race population for 2002 to 2006. For example White alone refers to people who reported White and did not report any other race category. For 2001 and earlier years, the CPS allowed respondents to report only one race group.

²Consistent with 2001 data through implementation of Census 2000-based population controls.

³Consistent with 2001 data through implementation of Census 2000-based population controls and a 28,000 household sample expansion.

⁴CPS 2005 ASEC file (2004 data) was corrected after the release of the 2004 Income, Poverty and Health

Insurance report due to adjustments to the weights.

⁵Consistent with 2011 data through implementation of Census 2010-based population controls.

Supplemental Poverty Measure (SPM)

Observations from the Interagency Technical Working Group - March 2, 2010

- Will not replace the official poverty measure
- Will not be used for resource allocation or program eligibility
- Census Bureau and BLS responsible for improving and updating the measure
- Continued research and improvement
- Based on NAS panel 1995 recommendations

The Research SUPPLEMENTAL POVERTY MEASURE: 2010

Issued November 2011

Consumer Income

P60-241

INTRODUCTION

The current official poverty measure was developed in the early 1960s, and only a few minor changes have been implemented since it was first adopted in 1969 (Orshansky, 1963, 1965a, 1965b; Fisher, 1992). This measure consists of a set of thresholds for families of different sizes and compositions that are compared to before-tax cash income to determine a family's poverty status. At the time they were developed, the official poverty thresholds represented the cost of a minimum diet multiplied by three (to allow for expenditures on other goods and services).

Concerns about the adequacy of the official measure have increased during the past decade (Ruggles, 1990), culminating in a congressional appropriation in 1990 for an independent scientific study of the concepts, measurement methods, and information needs for a poverty measure. In response, the National Academy of Sciences (NAS) established the Panel on Poverty and Family Assistance, which released its report titled *Measuring Poverty: A New Approach* in the spring of 1995, (Citro and Michael, 1995). Based on its assessment of the weaknesses of the current poverty measure, this NAS panel of experts recommended having a measure that better reflects contemporary social and economic realities and government policy. In their report, the NAS panel identified several major weaknesses of the current poverty measure.

- The current income measure does not reflect the effects of key government

policies that alter the disposable income available to families and, hence, their poverty status. Examples include payroll taxes, which reduce disposable income, and in-kind public benefit programs such as the Food Stamp Program/Supplemental Nutrition Assistance Program (SNAP) that free up resources to spend on nonfood items.

- The current poverty thresholds do not adjust for rising levels and standards of living that have occurred since 1965. The official thresholds were approximately equal to half of median income in 1963-64. By 1992, one half median income had increased to more than 120 percent of the official threshold.
- The current measure does not take into account variation in expenses that are necessary to hold a job and to earn income—expenses that reduce disposable income. These expenses include transportation costs for getting to work and the increasing costs of child care for working families resulting from increased labor force participation of mothers.
- The current measure does not take into account variation in medical costs across population groups depending on differences in health status and insurance coverage and does not account for rising health care costs as a share of family budgets.
- The current poverty thresholds use family size adjustments that are

¹The series starting in 1996 reflects an approximation of the impact of an editing error that was corrected in the 2005 ASEC (estimates of 2004 coverage).

²Implementation of Census 2000-based population controls occurred for the 2000 ASEC, which collected data for 1999. These estimates also reflect the results of follow-up verification questions which were asked of people who responded "no" to all questions about specific types of health insurance coverage in order to verify whether they were actually uninsured. This change increased the number and percentage of people covered by health insurance, bringing the CPS more in line with estimates from other national surveys. The data points are placed at the midpoints of the respective years.

³The data for 1999 through 2009 were revised to reflect the results of enhancements to the editing process.

⁴Implementation of 2010 Census-based population controls.

Note: Respondents were not asked detailed health insurance questions before the 1988 Current Population Survey.

Uninsured Rates by Race and Hispanic Origin: 1999 to 2011

(Percent)

Year	Non-Hispanic White	Black	Asian	Hispanic (any race)
1999 ^{1,2}	9.0	18.7	17.0	31.9
2000	8.6	17.3	16.7	31.4
2001	8.9	17.8	16.3	31.8
2002	9.4	18.8	17.0	30.8
2003	10.0	18.7	17.3	31.8
2004	10.0	18.0	14.7	30.8
2005	10.2	18.1	16.2	31.3
2006	10.3	19.7	14.4	33.1
2007	10.0	18.6	16.1	31.5
2008	10.4	18.4	16.8	29.8
2009	11.5	20.3	16.5	31.6
2010 ³	11.6	20.8	18.4	30.7
2011	11.1	19.5	16.8	30.1

Note: Respondents were not asked detailed health insurance questions before the 1988 Current Population Survey.

¹Implementation of Census 2000-based population controls occurred for the 2000 ASEC, which collected data for 1999. These estimates also reflect the results of follow-up verification questions which were asked of people who responded "no" to all questions about specific types of health insurance coverage in order to verify whether they were actually uninsured. This change increased the number and percentage of people covered by health insurance, bringing the CPS more in line with estimates from other national surveys. The data points are placed at the midpoints of the respective years.

²The data for 1999 through 2009 were revised to reflect the results of enhancements to the editing process.

³Implementation of 2010 Census-based population controls.
